

Vinitex Gargola

GENERAL

A horizontal PVC drain used for draining roof water, compatible with PVC membranes.

PROPERTIES

- Resistant to low temperatures (Flexible to - 40 °C).
- Compatible with all VINITEX membranes.
- Easily welded to PVC membranes.
- Completely flat borders to prevent obstructions
- Between the membrane and drainage system.
- 45 and 90 ° degree angle sections.
- Easy installation.

TECHNICAL DATA

	Ø (mm)	L (mm)
45°	100 x 65	425
45°	100 x 100	415
90°	63	500
90°	90	500
90°	110	500

APPLICATION

Vinitex systems should be installed by experienced and qualified personnel. Attached to Vinitex membrane which must be perforated beforehand to fit the size of the drain.

The drain is joined to the laminate using hot air thermo-welding. Weldability and the quality of welds are influenced by atmospheric conditions (temperature and humidity), welding conditions (temperature, speed, pressure, cleanliness etc) and by the condition of the membrane (cleanliness, humidity). The welder must be adjusted accordingly for correct welding.

All welds should be sealed using Vinitex Liquid.
